

Pavani Kunche

Senior VMware, Windows & Azure Infrastructure Engineer

+1 (561) 849-9309 | Pavanireddykunche14@gmail.com | USA | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Accomplished IT Infrastructure Engineer with 7+ years of experience designing, implementing, and supporting enterprise VMware and Windows Server environments across production and mission-critical infrastructures.
- Extensive hands-on experience in VMware vSphere administration, including ESXi host builds, vCenter management, cluster administration, HA, DRS, vMotion, Storage vMotion, datastore management, virtual machine provisioning, templates, snapshots, and VMware Update Manager (VUM).
- Strong expertise building, configuring, administering, and troubleshooting Windows Server 2008 R2, 2012 R2, 2016, and 2019 environments, including Active Directory, DNS, DHCP, IIS, RDP Licensing, file services, and server performance optimization.
- Proven experience providing L1/L2 infrastructure support, incident resolution, root cause analysis (RCA), capacity management, performance monitoring, and 24x7 production support while adhering to SLA and ITIL processes.
- Hands-on experience in enterprise patch management and vulnerability remediation using SCCM, WSUS, Shavlik, and VMware Update Manager, ensuring infrastructure security and compliance standards.
- Experienced in VMware-to-Azure migration initiatives, including infrastructure assessment, dependency mapping, migration planning, cutover execution, post-migration validation, and operational support.
- Served as a Build Engineer for VMware and Azure infrastructure solutions, responsible for server provisioning, standardized builds, template management, deployment automation, and infrastructure lifecycle management within large-scale enterprise environments.
- Actively builds and applies AI-driven tooling — GitHub Copilot, Ansible Lightspeed, Azure Copilot, and ChatGPT — into daily infrastructure work to move faster on scripting, provisioning, troubleshooting, and self-built automation.

CERTIFICATIONS

- Google AI Essentials Specialization — Certified
- Microsoft Certified: Azure Fundamentals (AZ-900) — Certified
- Microsoft Certified: Azure Administrator (AZ-104) — Trained, and applied directly in live production Azure environments

TECHNICAL SKILLS

Category	Technologies
Hardware	HPE Gen8, Gen9, Gen10, HPE Synergy, Dell PowerEdge, Cisco UCS Blades
Virtualization	VMware ESXi 5.x, 6.x, 7.x, vCenter Server, HA, DRS, vMotion, Storage vMotion, VUM
Operating Systems	Windows Server 2008 R2, 2012 R2, 2016, 2019
Cloud Platforms	Microsoft Azure, Azure Stack HCI, Azure Virtual Machines, VNets, Load Balancers
Server Build & Migration	ESXi Host Builds, Windows Server Builds, P2V, V2V, VMware to Azure Migration
Monitoring	vROps, Tivoli, Nagios
Storage & Backup	vSAN, HPE 3PAR, Veeam
Patching	SCCM, WSUS, Shavlik, VMware Update Manager
Automation & Scripting	PowerShell, PowerCLI, Python, Power Automate

AI-Assisted Engineering	GitHub Copilot, Ansible + Ansible Lightspeed, Azure Copilot, ChatGPT, Terraform + AI assistance
ITSM & Ticketing	ServiceNow, Remedy, ITIL

PROFESSIONAL EXPERIENCE

Mavenir

Cloud Engineer | September 2025 – Present

Key Responsibilities:

- Designing, implementing, and supporting Microsoft Azure and Azure Stack infrastructure solutions for enterprise workloads.
- Managing Azure Virtual Machines, Virtual Networks (VNETs), Storage Accounts, Load Balancers, and backup solutions.
- Performing infrastructure provisioning, server builds, and deployment activities for Azure and VMware environments.
- Monitoring cloud infrastructure performance, availability, and security while ensuring adherence to organizational standards.
- Troubleshooting infrastructure issues and providing L2 support for production environments.
- Collaborating with application, network, and security teams for cloud adoption and infrastructure modernization initiatives.
- Creating technical documentation, deployment standards, and operational runbooks.
- Participating in Incident, Change, and Problem Management activities following ITIL best practices.

Environment: Microsoft Azure, Azure Stack HCI, Windows Server 2016/2019, VMware vSphere, PowerShell, ServiceNow.

EPAM

Azure Migration Engineer | Apr 2024 – Aug 2025

Key Responsibilities:

- Led migration initiatives from on-premises VMware environments to Microsoft Azure and Azure Stack platforms.
- Conducted infrastructure discovery, dependency mapping, and migration assessments for enterprise applications and servers.
- Built and configured Windows Server environments and Azure infrastructure components based on business requirements.
- Executed lift-and-shift migration activities, migration cutovers, validation testing, and post-migration health checks.
- Worked as a Build Engineer for VMware and Azure solutions, responsible for server provisioning and standardized infrastructure deployments.
- Performed performance monitoring and troubleshooting of migrated workloads to ensure operational stability.
- Coordinated with application, network, storage, and security teams to ensure successful migration execution with minimal downtime.
- Developed migration documentation, implementation plans, and knowledge transfer documents.
- Provided production support and resolved infrastructure incidents while maintaining SLA commitments.

Environment: Microsoft Azure, Azure Stack HCI, VMware ESXi, vCenter Server, Windows Server 2012/2016/2019, PowerShell, ServiceNow.

Ericsson

Virtualization Engineer | Oct 2021 – Apr 2023

Key Responsibilities:

- Administered enterprise VMware vSphere environments consisting of ESXi 6.x and 7.x hosts in production environments.

- Built and configured ESXi hosts and Windows Server environments according to customer specifications and enterprise standards.
- Managed VMware clusters by enabling and administering HA and DRS features.
- Created and managed virtual machines, templates, snapshots, clones, and datastores.
- Performed virtual machine migrations using vMotion, Storage vMotion, and cold migration techniques.
- Performed ESXi host upgrades, VMware Tools upgrades, and virtual hardware upgrades.
- Managed server patching activities using VMware Update Manager, SCCM, WSUS, and Shavlik.
- Performed performance monitoring using vROps and proactively resolved performance issues.
- Provided L1 and L2 support for VMware and Windows environments and handled critical incidents through ServiceNow.
- Participated in RCA documentation and provided 24x7 production and on-call support.

Environment: VMware ESXi, vCenter Server, Windows Server 2012/2016/2019, vROps, SCCM, WSUS, Shavlik, Active Directory, ServiceNow.

Trianz

Systems Engineer – VMware & Windows Infrastructure | Jul 2020 – Sep 2021

Key Responsibilities:

- Managed VMware and Windows infrastructure operations in enterprise production environments.
- Built and deployed Windows Server environments and VMware virtual machines based on project requirements.
- Administered VMware clusters, datastores, templates, snapshots, and virtual machine provisioning activities.
- Installed, configured, and troubleshoot Windows Server 2012 R2 and 2016 environments.
- Managed Active Directory, DNS, DHCP, IIS services, and file permissions.
- Performed monthly patching activities and vulnerability remediation using SCCM and WSUS.
- Performed server health checks and proactively resolved alerts generated from monitoring tools.
- Participated in incident management and change implementation activities while maintaining SLA compliance.
- Prepared technical documentation and supported knowledge transition activities.

Environment: VMware vSphere, Windows Server, Active Directory, DNS, DHCP, SCCM, WSUS, ServiceNow.

IBM, India

Build Engineer – VMware & Windows Infrastructure | Mar 2018 – Mar 2019

Key Responsibilities:

- Built and provisioned VMware virtual machines and Windows Server environments according to enterprise standards.
- Created server templates and performed deployment of Windows Server instances for project requirements.
- Installed and configured VMware Tools and managed virtual hardware configurations.
- Administered VMware HA and DRS clusters and performed VM provisioning activities.
- Performed Windows Server patching, troubleshooting, and server health checks.
- Supported Active Directory administration and server configuration activities.
- Performed P2V and V2V migration activities and participated in server migration projects.
- Resolved L1 and L2 infrastructure incidents and coordinated with higher-level support teams.
- Created infrastructure documentation and participated in production deployment activities.
- Provided 24x7 operational support and followed ITIL processes for Incident and Change Management.

Environment: VMware vSphere, Windows Server, Active Directory, PowerShell, WSUS, ServiceNow.

AUTOMATION & TOOLING PROJECTS

Self-designed and self-built automation tooling used to cut manual effort out of migrations, approvals, incident triage, and infrastructure visibility.

- **OS & Application Migration Automation** (Power Automate + Python) — end-to-end tool that emails the application/VM owner for approval, then integrates with ServiceNow (via MCP) to auto-raise the change, notify stakeholders, and run the migration end-to-end, including copying files from Artifactory to the target repo.
- **Example:** *Ran a batch server migration through the tool end-to-end and cut a multi-day manual approval-and-handoff process down to hours.*
- **Central Infrastructure Dashboard** — unified dashboard mapping VMware clusters, hosts, VMs, Azure resources, and applications into a single live view for faster triage and decision-making.
- **Example:** *Spotted a datastore approaching capacity on the dashboard and resolved it proactively, before it could affect running VMs.*
- **AI-Assisted L1 Troubleshooting & Escalation Tool** (ChatGPT + GitHub Actions) — self-hosted triage assistant that runs an initial diagnostic pass on a reported issue and, via integration with the ServiceNow CMDB, auto-pulls server owner, support team, and managed-by details to surface the right escalation contact.
- **Example:** *Cut the time to identify the right team to escalate a production incident to from roughly 30 minutes of manual lookup down to under 2 minutes.*

Additional PowerCLI / automation reporting tools built and maintained:

- ESXi Patch Reporting — automated ESXi patch compliance reports across clusters for audit readiness.
- Inventory Collection — scripts extracting VM, host, datastore, and cluster inventory at scale.
- Health Checks — automated health checks for ESXi hosts, vCenter, and VMs.
- Citrix Migration Tool — automation workflows for Citrix workload migrations with minimal downtime.
- RAM Expansion Tool — bulk VM memory expansion with validation and logging.
- Hardware Version Tool — automated VM hardware upgrades across clusters for compatibility and compliance.
- KeePass Retrieval Tool — secure, scripted credential retrieval from KeePass for automation workflows.

EDUCATION

Florida Atlantic University, USA

2023 – 2025 | Graduate coursework

Bachelor of Technology (Computer Science Engineering)

Jawaharlal Nehru Technological University (JNTU) — 2014
